WEEKLY SUMMARY.....16-17
FEEDSTUFFS: WHOLESALE PRICES.....18-19

HIGHLIGHTS:

Grain and soybean bids were mostly lower for the week, pressured by favorable weather, harvest progress for wheat and corn, and corrections on recent sharp upturns. Wheat mostly 2 to 13 cents lower except soft wheat 2 to 5 cents higher. Corn 2 to 8 cents lower. Sorghum 12 to 29 cents lower. Soybeans 11 to 15 cents lower. Export wheat sales were fairly good this week but still very low for the year. Wheat harvest continues to progress with good yields being reported and elevators already full. Early planted corn is under pressure from rapid harvest progress. Elevators are trying to make room for the anticipated large crop. Very good export demand this week, limited declines in corn bids. Sharp losses in soybean bids were due to the lack of any fresh export orders and good crop conditions. Spillover weakness from wheat and corn also weighed on bids. Soybean oil and meal prices have declined most of the week which helped pull down bean bids. Also driving bids lower was mid-week profit taking on the Board.

WEEKLY SUMMARY.....13-14

FEEDSTUFFS: WHOLESALE PRICES.....15-16

CROP PRODUCTION.....17-23

HIGHLIGHTS:

Wheat bids finished the week mostly lower, despite the excellent export business this week. Continued harvest progress and active farmer selling pressured all commodities. Wheat mostly steady to 6 cents lower except Portland 6 cents higher. Corn 1 to 4 cents lower. Sorghum 4 to 13 cents higher. Soybeans 13 to 27 cents lower. Spring wheat harvest continues to progress, aided by favorable weather conditions. Elevators are full and many have lowered basis to slow farmer selling. Excellent export sales were reported this week for wheat with several big buyers in the picture. Corn bids slightly lower but soybean bids fell sharply as good weather and active harvesting undermined prices. Some areas are finding storage facilities difficult to find and with elevators already busting with wheat, piling is being reported in places. Corn export orders were very good this week as South Korea and Taiwan major players. Light soybean sales were on the books but failed to keep up with wheat and corn interest. Declines in soybean meal and oil demand helped to push bean bids lower.

WHEAT:

Kansas US No 1 Hard Red Winter, ordinary protein 7 3/4 cents lower at 2.64 3/4-3.00 3/4 per bushel. Minneapolis US No 1 Dark Northern Spring, 14 percent protein 6 1/4 cents lower at 3.36 1/2 per bushel. Portland US 1 Soft White Wheat 5 to 6 cents higher at 3.25-3.29 per bushel.

Omaha US No 2 truck Yellow Corn 1 to 2 cents lower at 1.64-1.65 per bushel. Chicago US No 2 Yellow Corn 4 1/2 cents lower at 1.60 1/4-1.92 1/4 per bushel. Toledo US No 2 Yellow Corn 3 1/2 to 4 1/2 cents lower at 1.78 1/4-1.85 1/4 per bushel. Minneapolis US No 2 Yellow Corn 3 1/2 cents lower at 1.68 1/4 per bushel.

Crop Production

Corn Production Down 2 Percent
Soybean Production Down 3 Percent
Cotton Production Down 4 Percent

Corn production is forecast at 9.38 billion bushels, down 2 percent from the last forecast and down 4 percent from 1998. Based on September 1 conditions, yields are expected to average 132.2 bushels per acre, down 2.5 bushels per acre from August and 2.2 bushels from a year ago. If realized, this would be the fourth largest production and third highest yield on record. Acreage for grain harvest is estimated at 71.0 million acres, unchanged from August.

Soybean production is forecast at a record high 2.78 billion bushels, down 3 percent from August 1, but up 1 percent from last year's record of 2.76 billion bushels. Based on September 1 conditions, yields are expected to average 37.9 bushels per acre, down 1.3 bushels from last month and down 1.0 bushel from 1998. Acreage for harvest is estimated at a record 73.3 million acres, unchanged from August 1 but up 3 percent from 1998.

All cotton production is forecast at 17.5 million 480-pound bales, down 4 percent from last month, but up 26 percent from 1998. If realized, this would be the eighth largest cotton crop on record. Based on September 1 conditions, yields are expected to average 621 pounds per harvested acre, down 28 pounds from last month. Condition of the cotton crop has deteriorated since last month in most of the cotton-producing States. Dry soils and above normal temperatures have stressed dryland cotton. Harvested acreage, at 13.6 million acres, reflects an increase of 30,000 acres in Louisiana from last month.

All wheat production is placed at 2.31 billion bushels, down less than 1 percent from the August forecast and down 10 percent from 1998. The U.S. yield is forecast at 42.3 bushels per acre. This is down 0.3 bushels from last month. Other spring wheat production is forecast at 508 million bushels, down 1 percent from last month and down 4 percent from last season. The final forecast of U.S. average yield is 33.9 bushels per acre, 0.3 bushels per acre lower than a month ago. Hard Red Spring production is down 1 percent from August to 455 million bushels because yields declined in Montana and South Dakota. Heat was the factor in both States. The South Dakota harvest is finished. Better Idaho yields have White Spring production up 1 percent to 52.5 million bushels. Durum wheat production is forecast at 110 million bushels, down 3 percent from last month and 22 percent less than 1998. The U.S. yield is now forecast at 28.3 bushels per acre, down 0.9 bushels from August 1. North Dakota's crop is maturing slowly; only 19 percent was combined as of August 29.

August Weather Summary

The extreme heat and dryness that developed in late July from Oklahoma and Texas to the southern Atlantic Coast persisted through August, stressing pastures and immature summer crops, including cotton and soybeans. Meanwhile, heat did not return to the Corn Belt after late July, keeping heat stress on Midwestern corn and soybeans at a minimum. Unfavorably dry weather persisted, however, across the southern and eastern Corn Belt, particularly in Missouri and the lower Ohio Valley. In contrast, wet conditions prevailed from the Southwest to the northern Plains and upper Midwest, courtesy of an active monsoon and numerous cold fronts. Beneficial rain fell in the Northwest, but dry conditions and lightning strikes sparked wildfire activity in California and the Great Basin. Much-needed rain also fell in the northern Mid-Atlantic region, tempering the 14-month drought. In the tropics, Bret became the first hurricane to cross the Texas coast this decade on August 22, arriving as a Category 3 storm (125 mph sustained winds) in sparsely populated Kennedy County, Texas. Hurricane Dennis, a category 2 storm (100 to 105 mph winds) brushed the coastal Carolinas on August 29-31, producing heavy rain, gusty winds, and beach erosion. Although no tropical systems affected southern Florida, rainfall was well above normal.

Monthly rainfall was more than 200 percent of normal from the Four Corners region to the central High Plains, and in a few locations on the northern Plains and interior Northwest. Precipitation was less than 25 percent of normal in many areas from central Texas to the middle and lower Mississippi Valley, in portions of the Great Basin, and in coastal and southern California.

Monthly temperatures averaged 2 to 5 degrees F above normal from Texas and Oklahoma to the southern Atlantic Coast. Temperatures were up to 3 degrees F above normal in the northern High Plains and the Northwest. In contrast, readings averaged as much as 3 degrees F below normal in the Corn Belt and as much as 5 degrees F below normal in California's San Joaquin Valley. Near-normal temperatures prevailed in the Mid-Atlantic region.

General Crop Comments: Mild temperatures eased crop stress in the central and northern Great Plains and most of the Corn Belt. Timely rains provided adequate moisture for crop development in parts of the central and western Corn Belt and central Great Plains. Increasing moisture shortages stressed crops in the southern and eastern Corn Belt and most of the lower Mississippi Valley and Southeast. Dry conditions aided small grain harvest across the Northern States from the Great Lakes to the Pacific Northwest and row crop harvest in the southern States from the Great Plains to the Atlantic Coastal Plains. Field preparations began for winter wheat seeding, but planting and tillage were delayed while growers waited for rain to recharge soil moisture supplies. Crop development remained slow in the Southwest due to persistent cool weather. Corn rapidly entered the silking stage in South Dakota, Colorado, and Pennsylvania early in the month. In Ohio, 40 percent of the crop entered the dough stage during the first week of the month and was nearly twice the normal rate on August 15. As mid-month approached, corn in the dough stage rapidly advanced in Iowa, Nebraska, and South Dakota. Fields quickly progressed to the dent stage along the Ohio River Valley in the southern Corn Belt, with more than half of the acreage denting in Missouri and Kentucky by August 15. After mid-month, acreage entering the dough stage rapidly increased in Colorado, while denting accelerated in Iowa, Illinois, Indiana, and Kansas. As of August 29, corn in the dough stage or beyond was at 92 percent, and 62 percent of the crop was at the dent stage or beyond. Development was about 1 week ahead of the 5-year averages of 81 and 44 percent, respectively. Twelve percent of the crop was mature by the end of the month, as progress neared 50 percent along the Mississippi and Ohio River Valleys in the southern Corn Belt. Harvest began in the central and High Plains regions of Texas and was virtually complete in the southern and coastal regions of the State. Ninety-six percent of the soybean acreage was blooming by mid-August, slightly ahead of last year and the average. Acreage entering the blooming stage remained active in the northern Mississippi Delta and lower Ohio and Tennessee River Valleys after mid-month. Soybeans setting pods advanced well ahead of the average in the eastern Corn Belt, and slightly ahead of normal in the western Corn Belt. Nearly one-fourth of the acreage in Indiana and almost one-third of the crop in Ohio began setting pods during the first week of the month. As mid-month approached, pod setting accelerated in the central and western Corn Belt, advancing about 25 percentage points in Nebraska and Minnesota and nearly 20 percentage points in Illinois and Kansas during the second week of the month. Warm weather quickly ripened fields in Kentucky, Mississippi, Tennessee, and Ohio late in the month. On August 29, more than half of the acreage was dropping leaves in Mississippi, 34 percentage points ahead of the average. A few isolated fields began dropping leaves in the western Corn Belt, while ripening accelerated in the eastern and southern Corn Belt. Above normal temperatures promoted cotton development in the southern Plains, Mississippi Delta, and Southeast during most of August. Conditions steadily deteriorated throughout the month in most areas, as soil moisture levels diminished. Isolated showers temporarily boosted conditions along parts of the Gulf Coast and Atlantic Coastal Plains. Cool weather hindered growth in California most of the month. By August 29, bolls were opening on 35 percent of the cotton acreage, as warm weather accelerated ripening in Mississippi, Missouri, and Tennessee. Harvest began in southern Texas and advanced northward into the Blacklands, Central Texas, and the Upper Coast as the month progressed. As the month began, winter wheat harvest was nearly complete, while spring wheat and barley harvest gained momentum. Dry weather aided harvest efforts in the northern Great Plains and Pacific Northwest, but late developing fields limited the harvest pace for most of the month. The oat harvest proceeded ahead of normal in the Corn Belt, but slow crop development and late-month rains delayed progress in Minnesota and North Dakota. Growers prepared fields for seeding winter wheat in the southern and central Great Plains, but planting was delayed due to dry soils. Warm weather promoted rice development in

the lower Mississippi Valley as fields rapidly entered the heading stage in Arkansas and Mississippi. Development lagged in California due to persistent cool weather. In Texas and Louisiana, the harvest began early in the month and remained active as dry weather prevailed most of the month along the western Gulf Coast. The harvest pace gained momentum in inland areas of the Mississippi Delta late in the month. As of August 29, the crop was 26 percent harvested. Sorghum development proceeded slightly behind normal for most of the month, with 94 percent headed, 53 percent turning color, and 28 percent mature on August 29. Fields rapidly progressed to the heading stage in New Mexico and South Dakota late in the month. Fields turning color advanced 29 percentage points in Illinois during the last week in August. Hot weather quickly ripened fields in the southern Great Plains and lower Mississippi Valley.

Corn for grain: Acreage harvested and to be harvested for grain is forecast at 71.0 million acres, unchanged from last month but down 2 percent from 1998. The September 1 Corn Objective Yield data indicate a record level stalk count for the seven objective yield States (Illinois, Indiana, Iowa, Minnesota, Nebraska, Ohio, and Wisconsin). The September forecasted ears per acre are the highest on record and, if realized, would exceed the previous record final ears per acre set in 1998. Ear measurements from the sample plots indicate a length equal to last year and the 5-year average. As of August 29, 62 percent of the acreage was reported dented in the 17 major States. This compares with 62 percent last year and 44 percent for the 5-year average. Corn rated in good to excellent condition totaled 57 percent compared to 69 percent for a year ago. Corn rapidly entered the silking stage in South Dakota, Colorado, and Pennsylvania early in the month. As mid-month approached, corn in the dough stage rapidly advanced in Iowa, Nebraska, and South Dakota. Fields quickly progressed to the dent stage along the Ohio River Valley in the southern Corn Belt, with more than half of the acreage denting in Missouri and Kentucky by August 15. Harvest began in the central and High Plains regions of Texas and was virtually complete in the southern and coastal regions of the State. In Iowa, forecasted stalk and ear populations are both at record levels when compared to final counts. Ear length is above the 1994-98 average and 1998. Sixty-four percent of the corn was dented as of August 29, compared to 64 percent in 1998 and the 5-year average of 41 percent. Corn condition was rated 70 percent good to excellent. Forecasted stalk and ear counts are at a record high level for Illinois when compared to final counts. Ear length is below last year but equal to the 5-year average. Seventy-five percent of the corn was dented, compared with 60 percent last year and 48 percent for the 5-year average. Forty percent of the corn was rated in good to excellent condition. In Indiana and Nebraska, forecasted stalk and ear counts are at a record high. Ear length is below both last year and the average for both states. The corn dented in Indiana was at 74 percent compared to 55 percent for last year and the average of 40 percent. The majority (72 percent) of corn in Indiana was rated in fair to good condition. Nebraska corn was 52 percent dented on August 29 compared with 67 percent in 1998 and the average of 45 percent. The Nebraska corn crop was rated 71 percent good to excellent. Wisconsin stalk and ear counts are at the highest level on record. Ear length is above both last year and the average. Forty-two percent of the crop was dented on August 29, compared with 45 percent in 1998 and the average of 25 percent. Condition of the Wisconsin corn crop was rated 86 percent good to excellent. Minnesota and Ohio stalk and ear counts from Objective Yield data indicate levels below last year but above average. Ear length in Minnesota is below 1998 but above the 5-year average. In Ohio, ear length is below both 1998 and the average for 1994-98. Corn dented in Minnesota was 56 percent by August 29, compared to 71 percent for 1998 and the average of 35 percent. Ohio corn was 62 percent dented, compared to 38 percent for last year and the average of 28 percent. Minnesota corn was rated 63 percent good to excellent while the Ohio crop was rated 68 percent fair to good.

Sorghum: Production is forecast at 580 million bushels, down 1 percent from the August forecast but 12 percent above the 1998 production. Area harvested and to be harvested is unchanged from August, at 8.50 million acres, 10 percent higher than the previous year. The forecasted yield, at 68.2 bushels per acre, is down 1 bushel from last month but 0.9 bushels higher than last year's yield. Compared to August, forecasted yields are higher for Louisiana, Mississippi, and Oklahoma; unchanged for Colorado, Kansas, and New Mexico; and lower in the remaining States. Record high yields are expected in Louisiana, Mississippi, and Texas. As of August 29, 28 percent of the crop was mature in the 12 major States, equal to the average. The crop matured ahead of normal in Louisiana and Mississippi during August.

Barley: Production for 1999 is forecast at 283 million bushels, less than 1 percent higher than the August forecast but 20 percent below the 1998 production. Area harvested and to be harvested is unchanged from August, at 4.83 million acres, down 18 percent from the previous year. Yields are expected to average 58.5 bushels per acre, up 0.3 bushels from last month but 1.6 bushels below last year's yield. Forecasted yields were unchanged from August in 5 of the 11 September forecast States. Compared to the August forecast, Idaho, Washington, and Wyoming are expecting higher yields, while North Dakota, Oregon, and Wisconsin are forecasting lower yields. Wet weather slowed harvest in most major States during August. As of August 29, 55 percent of the barley was harvested, behind the 71 percent 5-year average. If achieved, the forecasted yield in Wyoming would equal the record high.

Durum Wheat: Grain area is unchanged from the last forecast at 3.90 million acres. Harvested yields were lower than expected in South Dakota because of dry conditions. The North Dakota Durum crop trailed a week behind the 5-year average throughout August; harvest was only 19 percent complete on August 29. Average harvest progress in North Dakota is 33 percent. North Dakota's Durum Objective Yield survey head count and weight forecasts are improved from a month ago, but still lower than average.

Other Spring Wheat: Harvested area for 1999 is 15.0 million acres, unchanged from last month and down 1 percent from last year. As of August 29, harvest trailed average by four points in the major producing states; only the South Dakota harvest was ahead of average and was nearing completion. Idaho harvested yields are a bit higher than were expected last month. Washington's average yield is unchanged and thunderstorms are slowing the harvest. Objective Yield survey data shows plant populations at above average levels in Minnesota, below in Montana, and about average in North Dakota. Head weight forecasts are up from August in Minnesota and North Dakota, but are still below average; Montana's weight forecast dipped but remains better than average.

Rice: Production is forecast at a record high 212 million cwt, down 1 percent from August 1 but 13 percent above 1998. Area for harvest is expected to total 3.56 million acres, down slightly from August 1 but 7 percent above a year ago. Yields are expected to average 5,967 pounds per acre, down 26 pounds from August but up 298 pounds from 1998. Yield prospects in California, Mississippi, Missouri, and Texas remained unchanged while Arkansas and Louisiana decreased from a month ago. The Arkansas harvest was slightly ahead of schedule, while Texas was 22 percent ahead of the 5-year average. California harvest has not begun. The cooler temperatures in July are expected to delay harvest by about two weeks. As of August 29, Arkansas crop development was slightly ahead of normal and was rated 71 percent good to excellent. The Louisiana harvest was 79 percent complete and yields are less than earlier expectations. The crop condition in Mississippi and Texas rated mostly good.

Soybeans: Acres expected for harvest, at 73.3 million acres, are unchanged from August but are 3 percent above the 1998 record harvested acreage. As of August 29, the soybeans crop was rated mostly in fair to good condition. At month's end, crop conditions had deteriorated in much of the Delta, Southeast, and the Mid-Atlantic region as soil moisture levels remained depleted and high temperatures persisted. Conditions in the western Corn Belt States and northern tier States were more favorable during August as milder temperatures and occasional rains eased the stress caused by the heat wave that hit in late July. In the drier eastern Corn Belt and Mid-Atlantic, the crop began to show some signs of improvement as much needed precipitation was finally received by the second week of August and continued through the end of the month. In the seventeen non-Objective Yield states that make yield forecasts in September, ten states reduced yields from August. The largest yield reductions in September were seen in Alabama, Tennessee, Kentucky, Louisiana, Kansas, and South Dakota. Yields were also lowered in Georgia, Delaware, Mississippi, and South Carolina. Yield increases were made in two states, North Dakota and Texas, while yields in Maryland, Michigan, North Carolina, Virginia, and Wisconsin were unchanged from August. If realized, pod counts from the September Objective Yield survey will be the highest on record in Illinois, Indiana, Iowa, Minnesota, and Nebraska. In Missouri, pod counts for September were the lowest since 1988. In Ohio, pod counts were the second highest on record following the 1998 season. Overall, crop maturity was running at an accelerated pace. As of August 29, 94 percent of the soybeans crop had already set pods, 1 percentage point ahead of 1998 and 2 percentage points ahead of the 5-year average. The percent of soybeans dropping leaves, at 6 percent, was 1 percentage point ahead of the previous year and 3 percentage points ahead of the average.

Sugarbeets: Production is forecast at record high 33.6 million tons, 3 percent above the previous record in 1998. Growers in the 12 sugarbeet-producing States expect to harvest 1,525,500 acres, 5 percent more than last year and the highest since 1,540,500 acres were harvested in 1969. The yield is forecast at 22.0 tons per acre, 0.5 ton below 1998. Seasonal temperatures and adequate moisture supplies promoted healthy development in most of the Great Plains. A few fields in Colorado were damaged by hail and excessive moisture. Some fields in North Dakota and Minnesota were also hampered by excessive soil moisture. The California beet crop is forecast at a record high, as cooler-than-normal summer weather boosted yield prospects. Increasing moisture shortages stressed some fields in Michigan.

Sugarcane: Production is forecast at a record high 37.1 million tons, 7 percent above the previous record of 34.7 million tons set last year. U.S. sugarcane growers intend to harvest a record high 987,500 acres for sugar and seed during the 1999 crop year, 4 percent more than last year's final harvested acres. The record high acreage is due to a 30,000 acre expansion in Louisiana and a 9,000 acre increase in Florida. The expansion in Louisiana is due to increased use of a new high-yielding variety that can be harvested mechanically even if it is severely lodged. Yield is forecast at 37.5 tons per acre, 0.9 ton above 1998. A record high yield is forecast for Louisiana due to ideal growing conditions, a high yielding sugarcane hybrid, and increased utilization of a more efficient harvester. Warm weather and frequent rains promoted rapid growth in Florida.

HIGHLIGHTS:

Sharp gains in grain and soybean bids were due to rain delays in harvest this week due to early week rains in the Cornbelt areas and a busy week for export business, especially wheat sales. Gains were limited late in the week by USDA's Stocks Report showing wheat, corn and soybean carryover stocks up substantially from last year. Wheat 3 to 8 cents higher. Corn 1 to 10 cents higher except Toledo 5 cents lower. Sorghum 10 to 12 cents lower. Soybeans 11 to 13 cents higher. Export wheat sales were very good this week with several big buyers on the books. Weekly export inspection figures for last week were larger than expected with wheat at 27.2 million bushels and up 51.8 for the year. Spring wheat harvest is all but finished and some yields aren't as good as expected. USDA estimated carryover stocks for all wheat at 2.46 billion bushels, up 3 per cent from last year. Corn and soybean bids were sharply higher for the week with early week rains delaying harvest in many areas. Elevators are full of wheat and farmer selling active. Export sales have been slim this week for corn and soybean sales were very light. However, inspection figures for year to date are up 41.4 million bushels for corn and 28.7 for soybeans. Old crop corn stocks came in at 1.80 billion bushels this week, up 37 percent from 1998. Soybean stocks were at 348 million bushels, up 74 percent.

FEEDSTUFFS: WHOLESALE PRICES....15-16

CORRECTION on SEPT. MONTHLY FEEDSTUFFS(pg 24 in last issue)....17

HIGHLIGHTS:

Weakness in wheat bids was due to light export sales this week, despite the low prices. Japan, however, was the big buyer in wheat. Some profit taking was also noted on the Board. Corn bids turned slightly lower on harvest progress but good export sales limited declines. Early week upturns in corn bids sparked some farmer selling. Good yields have been reported but many areas could receive rainfall this weekend, slowing harvest. Sharp gains in soybean bids was a reaction to improved meal and oil demand this week and continued dry conditions in Brazil. Light export business was reported. Weekend forecasts call for rainfall in the Midwest areas which will force farmers out of fields and slow harvest progress. Wheat mixed. Corn steady to 4 cents lower. Sorghum mixed. Soybeans 3 to 10 cents higher.

WEEKLY SUMMARY....13-14
FEEDSTUFFS: WHOLESALE PRICES....15-16

HIGHLIGHTS:

Good export sales this week offered support to grain and soybean bids with Egypt, Japan and Taiwan the major buyers. Indications that Russia may need more wheat this year also lent strength to wheat bids. However, pressure was also noted in bids due to active harvesting of corn and soybeans. Corn is reported to be over 60 percent complete and soybeans over 80 percent. Favorable weather is forecast this weekend in the Corn Belt areas. Many areas show increased farmer selling after recent higher trends earlier in the week. Soybean meal and oil prices were lower this week. Drought conditions were eased as Brazil received rain this week.

WEEKLY SUMMARY....13-14
FEEDSTUFFS: WHOLESALE PRICES....15-16

HIGHLIGHTS:

Wheat bids finished mixed for the week after erratic trading. Corn bids were moderately higher on good export sales and soybean bids fell substantially lower on harvest pressure and board weakness. Wheat mixed, 10 cents lower to 13 cents higher. Corn 1 to 3 cents higher and up to 12 cents higher in Minneapolis. Sorghum steady. Soybeans 8 to 14 cents lower. Dry conditions continued in the southern Plains areas and concerns over winter wheat crops have become more intense. Less than 50 percent coverage has been seen from the coming storm and most forecasters are showing less than 1/2 inch accumulations in the areas that normally receive rain. More moisture is needed for germination and early wheat growth. Good export orders this week for wheat and optimism continues that more are in the works. However, Algeria is reported to have bought another couple of cargoes of German and French wheat this week. Very good export sales of corn this week as Japan and Taiwan the big buyers. USDA reported the strongest export sales of the year at 64.4 million bushels. These low prices seem to be attracting business. Harvest pressure has eased as many places have finished and farmer selling has been light. Soybean bids closed the week sharply lower due to active harvest, fund selling and very light export demand. Harvest progress continues with over 90 percent already stored. Lower soy oil prices also weighed on bean bids. Good rains in Brazil and Argentina this week cut bean prices. Brazil is expected to produce 30.5 million metric tons and World soybean production is pegged at a record 153.9 million metric tons.

FEED:

WEEKLY SUMMARY....13-14
FEEDSTUFFS: WHOLESALE PRICES....15-16

HIGHLIGHTS:

Good weekly export demand for all commodities, slow farmer selling, and dry weather conditions in winter wheat areas, supported grain and soybean bids. Wheat 6 to 18 cents higher. Corn 4 to 15 cents higher. Sorghum 4 to 5 cents higher. Soybeans 18 to 23 cents higher. Wheat bids were higher again this week as export demand continued good and reports for new orders looks encouraging. Traders are concerned over continued dry conditions in the winter wheat areas of the southern Plains. Poor rooting cannot stand up against upcoming winter conditions. Planting is estimated at over 90 percent complete with only 50 percent of the crop rated good or excellent conditions. This is down from 65 percent last year. Korea and Taiwan bought more corn this week, pushing bids higher. Concerns that Korea may purchase corn from China was also supportive. Farmer selling has been light over the past week but higher prices could spur some selling. US corn harvest is all but finished with progress ahead of last years. Soybean bids jumped sharply higher following corn and wheat bids. Improved export business and strong soybean meal demand provided strength. Soybean harvest was estimated at over 93 percent complete. Farmers are holding on to crops as long as possible.

FEEDSTUFFS: WHOLESALE PRICES FOR OCTOBER 1999....23-24

Grain and soybean bids declined after two consecutive weeks of higher trends. Mid-week reports from USDA stirred a selling frenzy. Also, good export sales were on the books for all commodities, this failed to strengthen bids. Wheat 6 to 21 cents lower. Corn 3 to 12 cents lower. Sorghum 1 cent lower in Kansas City with no quote from Texas. Soybeans 10 to 14 cents lower. Winter wheat crops received some rainfall last week but it could be too late for the rooting system if Winter conditions move in soon. Fall weather remains unseasonably warm and many areas need moisture. Export sales were very good this week with Egypt a big buyer. Corn bids were sharply lower due to heavy profit taking mid-week. USDA estimated corn production at 9.54 billion bushels, down 2 percent from last year. Expected yield was forecast at 134.5 bushels per acre, up 0.1 bushels from 1998. If realized, this would be the third largest production and second highest yield on record. Export sales were fairly light this week for corn. Soybean production was shown at 2.67 billion bushels, 2 percent below last years record 2.74 billion bushel crop. Yield figures are set at 36.7 bushels per acre, down 2.2 percent from 1998. Substantial export sales were reported for beans this week.

Wheat millrun FOB the San Francisco Bay area mill door was 3.00 to 7.00 higher from 65.00-68.00; FOB the Los Angeles mill door was 3.00 to 7.00 higher at 68.00 in a limited trade.

OTHERS:

Prices on Sugarcane Molasses were steady. Large quantities of molasses continued to pressure the domestic market. Trading activity was light to moderate. Light demand, large supplies of other feed ingredients and large molasses supplies worldwide pressured the market. Far Eastern demand is slightly stronger, but trading is below normal levels. European demand is weak with large supplies of molasses and comparable feedstuffs available. Sugar and molasses production continued in Louisiana, Texas and Florida with good yields and production reported. Rice Bran was steady to 5.00 lower; Millfeed was mostly steady to 5.00 higher; Hulls were steady to 1.00 lower. Alfalfa Meal was mostly steady across the nation this past week.
